SUMMARY OF ECOMMERCE INSIGHTS AND ANALYSIS

PROJECT TITLE: Ecommerce Dataset

PROJECT OVERVIEW

An e-commerce dataset contains information about sales, customers, products, orders, revenue, and payments. It helps businesses understand customer behavior, identify best-selling products, and track sales performance. It also helps to find insights around the country with loyalty level.

he main objective was to prepare the raw product dataset for further analysis by identifying and correcting data-quality problems.

PROJECT METHODOLGY:

The workflow followed these major stages:

1. Inspecting the raw dataset
2. Identifying missing values
3. Handling missing categories
4. Identifying inconsistent text formats
5. Correcting category errors
6. Removing duplicate records
7. Splitting the Product ID into meaningful fields
8. Merging Product Name and Brand Name
9. Applying appropriate number and date formats
10. Applying conditional formatting
11. Validating the final cleaned dataset

DATASET DESCRIPTION:

Dataset contains the details about STORE,PRODUCT, BRAND,CUSTOMER,SALES , and DISCOUNT.

It contains city state country wise details and also loyalty type customers helps to find performance.

Tools & Excel Functions Used

Software

- **Microsoft Excel**

Excel Features

- **Find & Replace**
- **Remove Duplicates**
- **Conditional Formatting**
- **Number Formatting**
- **Date Formatting**
- **Text Manipulation**
- **Column Splitting**
- **Column Merging**
- **Data Validation**
- **Pivot tables**
- **Data visualisation**
- **Data insights**
- **Xloolup,vlookup**
- **Forecasting This project represents one of my practical steps toward becoming a Data Analyst.**

The project demonstrates how a raw dataset can be systematically inspected, cleaned, transformed, formatted, and validated & creating data visualisation

About Me

I am an aspiring Data Analyst developing practical skills in data cleaning, data transformation, visualization, and analytical problem-solving.

I am currently building hands-on projects using tools such as Microsoft Excel, SQL, Python, and Power BI to strengthen my data analytics portfolio.

I am interested in transforming raw data into meaningful insights and continuously improving my analytical and technical skills.

using Microsoft Excel before being used for analysis.
